DETAILED ACTION

Response to Arguments

Applicant's arguments filed 7/17/03 have been fully considered but they are not persuasive.

The applicant argues that the prior art does not teach: "determining a power signal from a position of an operating element." The examiner disagrees. The prior art teaches it in column 16, lines 23-34. Further, the applicant is arguing subject matter that has not been claimed as "regulating output signal and the problem of torque cushioning or load-reversal damping."

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 7, 8, 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamaguchi et al (4,345,558).

As per claims 7, 11 and 17, Yamaguchi teaches:

- determining a power determining signal from a position of an operating element (column 16, lines 23-34);
- filtering the power determining signal with a filter, the filter including at least one high pass filter and at least one low pass filter connected in parallel (figure 13); and
- controlling the actuator element as a function of the filtered power determining signal (column 16, lines 58-61).

Art Unit: 3661

Yamaguchi does not teach the element to be use in a vehicle. However, this feature is obvious to one of ordinary skill in the art, because it will provide the same benefits and both the prior art and the vehicle use an internal combustion engine.

As per claims 8 and 18, it is old and well known that a pulse corresponds in direction to a direction in change from the signal.

As per claims 13, 15 and 19, the use of an acceleration pedal is old and well known in the art.

As per claims 14, 16 and 20, the use of a fuel-metering device is old and well known in the art.

Allowable Subject Matter

3. Claims 9 and 10 are allowed.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 3661

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
